Ralph,

Thanks for the raw-data files for the current borehole logging at the Cayuga/Powerex site.

As we discussed yesterday, USGS will only use these logging data for current ongoing evaluations and discussions as the work is being completed. We will not release or distribute the logs until all logging is completed and the information is formally released by GE/OBG.

-Dave

Subject Borehole geophysics - Raw data files

Good morning Dave:

Attached are the gamma logs for B-34D5, B-50D5 and B-51D5. As you know, the data files for B-29D5 were provided to you in the field on Wednesday.

As we discussed, based on these data and close inspection of the rock core, we believe that B-34D5 and B-50D5 are short of the Camillus contact by about 5 to 10 feet. We plan to mobilize the drill rig back to these locations and deepen the boreholes accordingly.

B-29D5 and B-51D5 are both deep enough as is. We will be starting geophysics at B-51D5 this morning and will finish next week. Also, I anticipate that we will be at total depth for B-52D3 today and plan to complete borehole geophysics at this location early next week.

If you plan to upload these files into welcad, please email me the well cad file for my files.

Let me know if you have any questions.

Thanks

Ralph
